Letter of Recommendation for Daniella Donn

It is with great pleasure that I recommend Daniella Donn for the position of [role].

I develop custom automation and IoT systems for Jabil Elmira that often utilize traditional and A.I. computer vision software. Right from the start Daniella made it clear she wanted to excel at computer programming and computer vision. I was impressed by not just her ambition but also her ability to learn and understand technically complex concepts.

In the six months of us working together Daniella had developed multiple applications. She worked on applications involving the use of input and output devices, sending automated emails, traditional and A.I. computer vision, and automating Excel actions with Visual Basic.

Eager to continually expand her knowledge, Daniella would often seek out information on her own and continue learning concepts beyond our lessons. She was able to quickly grasp new concepts and bring them into her work.

Of all the students I have worked with regarding programming and automation, Daniella was by far the most driven and capable. It was a joy to work with her and I gladly provide my recommendation.

Sincerely,

Anthony Narde
